REFUELLING ALERTS HELP KALAYVANI TRANSPORT SAVE 10% ON FUEL

ODC cargo specialist Kalaivani transport was facing dual problem of poor visibility of fuel consumption, staff accountability & discipline. Kalaivani operates with Own trucks. Fuel is the single largest operating expense and there is high variability in fuel expenses. Month long round trips mean fuel voucher reconciliation happens much after the actual filling and consumption. "It used to be a post mortem exercise; we could reconcile fuel vouchers only after the trip was over; by then it was too late to take action" says R Ramesh, Operations Manager. "Post installation of Omnicomm fuel sensors, we are getting real time accurate refueling alerts; so now we know exactly how much fuel was filled, with location and time. One time we got this alert for 235 Liters. I called the driver and he reported he had filled 260 liters. Disciplinary action confirmed 235 liters. The system acts as a deterrent and staff behavior is gradually shifting to greater accountability"

Omnicomm Partnered with Infotrack Location Intelligence solutions to bring accurate and reliable visibility to ODC cargo specialist Kalaivani Transport
